PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	This is a review and not research manuscript. A wide range of ideas under an encompassing title, with examples from several 'developing' countries. The author(s) should revise the abstract to: 1. Justify the review, 2. Identify what is missing in linking climate change on soil productivity, specifically in developing countries, 3. Synthesise the findings to highlight what the author(s) managed to glean from the literature, 4. Highlight the mitigation efforts and potential benefits to farmers. As for the whole manuscript: Structure can be improved by classifying the topics and sub-topics in a more realistic and streamlined way so that the reader can relate to: Effect-Productivity-Mitigation as indicated by the title.	The author informed the journal the paper is a review at submission. It has been changed in the manuscript. The abstract has been revised and several parts in the manuscript have been modified to address the concerns of the reviewer.
<u>Minor</u> REVISION comments		
<u>Optional/General</u> comments	Style and grammar can be improved to streamline ideas and link paragraphs in a more understandable manner by the average reader.
