PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	The level of nitrate concentration may not be a good reflection of the presence or absence of faecal coliform in water. Other natural or anthropogenic sources of nitrates in water sources occur. In Methodology section, author(s) did not mention the procedure utilised in the study of the physicochemical and microbiological quality of water samples. Also, apart from nitrate, author(s) have not analysed for the presence of other chemical compounds in water samples. In Discussion section, author(s) have not discussed into detail results obtained with relevant reference to appropriate literature citations. Reports of several similar results of studies carried out on similar subjects abound in literature which should be utilised in discussing results obtained. In references, these should be revised in line with journal formatting requirements. For instance, upper case letters need not be utilised in writing of references on the list. Also further details of each reference beyond the year of publication, volume, issue number and page range are not needed to be presented.	
Minor REVISION comments		
Optional/General comments
