PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	- Careful review through the text. Sometimes authors refers adsorption, others absorption. - Rewrite titles in Table 1 and 2. - Units are not properly written. - Ni removal % in Figure 3 does not correspond to those observed in Figure 2. - X- labels in Figures 3, 4, and 5 are not clear. - In section 3.2.5 the text is not referred to Figure 4 but Figure 6. - Figure 7 is not biosorption. - In lines 291-293 if a chemical equilibrium is reached (or saturation of the active sites), then it is not a mass transfer problem. Otherwise, authors must clearly explain this statement. - Line 297 does not refer to any Table nor Figure. - Sentence in line 305 contradicts what it is observed in some Figures, where it is clear that Fe has more removal %. - In Table 4 is not well-defined what is inlet and outlet. - X-label in Figure 8 does not correspond to the Figure. - Section "Application test on industrial wastewater" is not clear what authors try to explain. It must be totally rewritten.
