

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	Asian Journal of Environment & Ecology
Manuscript Number:	Ms_AJEE_41004
Title of the Manuscript:	Removal of heavy metals Cd (II), Fe (III) and Ni (II), from aqueous solutions by natural (clinoptilolite) zeolites and application to industrial wastewater
Type of Article:	Original Research Article

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
The new version of the manuscript is even worse than the previous one. Authors did not attend most of the observations, and now conclusions section is missing. I insist, several grammatical mistakes appear through the text, and they should be corrected before the manuscript being accepted. For instance: In line 162, what is Louise acid theory? In line 158, what is SNZ? And many others through the text. Lines 331-332 did not refer to figure 8. Again, lines 278-281 is not a mass transfer limitation if chemical equilibrium is reached. Also, this sentence contradicts section 3.2.4.
