

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	Asian Journal of Medicine and Health
Manuscript Number:	Ms_AJMAH_33813
Title of the Manuscript:	EFFECTS OF TOBACCO CIGARETTE SMOKING ON SOME HAEMATOLOGICAL PARAMETERS OF MALE CIGARETTE SMOKERS IN SOUTHERN NIGERIA.
Type of Article:	Original Research Article

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
1. The paper is still has typological errors (highlighted in the manuscript). 2. The authors have not provided any description of the contents in table 1. 3. The statement "The alpha level of the study ..." must be included in the statistical analysis section. 4. I would strongly want the authors to report the 95% confidence interval together with the actual p-values. It is also important to check whether assumptions required for the t-test hold. 5. The study limitations have not been included in the discussion. Does this study have no limitation at all?	1. The typological errors have been rectified. The ones that require addition have been highlighted whereas the ones that required removing have been deleted. 2. Table 1 has been described. 3. The alpha level has been inserted into the statistical analysis section. 4. The actual p values and CI have been inserted. The assumptions of t test were met (Shapiro-Wilk test values were >0.05). it is pertinent to note that the CI interval and P values were initially left to avoid clumping the table. 5. The study limitation has been included
