

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	Asian Journal of Medicine and Health
Manuscript Number:	Ms_AJMAH_38431
Title of the Manuscript:	WORK- RELATED MUSCULOSKELETAL DISORDERS AMONG RADIOLOGISTS IN NIGERIA
Type of Article:	Original Research Article

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
In lines 59 and 60 the authors say: " The study aimed at investigating the prevalence of work-related musculoskeletal discords among radiologists..". Its correct. But, in lines 72, 73 e 74 (Materials and Methods) the authors say: " Pearson`s Chi square analysis was used to determine the association of prevalence of work related musculoskeletal symptoms with number of years of ultrasound practice..." So, The authors should not state that they analyzed the relationship between "prevalence of work related musculoskeletal symptoms with number of years of ultrasound practice... when this is not an objective of the article. But if they want to do it, they must put the Pearson`s Chi square analysis in the table. The "number of years of ultrasound practice is in the table 3 not table 2.	Thanks for calling my attention to this disharmony in the objective of the article. I have esponged the "pearson's chi square which is out of place from the materials and methods and also from the result.
