

SDI Review Form 1.6

Journal Name:	Asian Journal of Medicine and Health
Manuscript Number:	Ms_AJMAH_38511
Title of the Manuscript:	ORAL – SYSTEMIC HEALTH : A REVIEW
Type of the Article	Review Paper

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

(<http://www.sciencedomain.org/page.php?id=sdi-general-editorial-policy#Peer-Review-Guideline>)

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	Statistics should be taken into account. All reviewed articles should answer these questions: Sample size? Has a statistical test been performed? Have the association measures been calculated? In addition, since periodontitis is a multifactorial disease, adjustments for age, ethnicity, education, smoking, alcohol consumption, infections, hygiene, and poverty were made? There seems to be confusion between significance and association. Some authors did not find evidence of association between periodontal diseases and systemic diseases. Some authors have found, but association does not mean cause. These points of view are not well exposed. Good conclusions are expected. "Better planning of prevention programs" "periodontitis and systemic conditions is now the focus of a wide range of research around the world" are good conclusions?	Ok
<u>Minor</u> REVISION comments	First of all, references in abstracts are unusual. There should be a review (commas, in particular). References should follow guidelines.	
<u>Optional/General</u> comments		

As per the guideline of editorial office we have followed VANCOUVER reference style for our paper.
