Title of the Manuscript:	Bizarre Retroperitoneal Fibromatosis: Challenges in Management
Type of the Article	Case Study

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

(<http://www.sciencedomain.org/page.php?id=sdi-general-editorial-policy#Peer-Review-Guideline>)

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	1. Please provide contrast CT. Vessel involvement will be better seen in contrast CT. 2. White arrowhead in fig 3 refers to right common iliac artery , not external iliac artery 3. Expand TED stocking 4. MRI could have been done before surgery, as it better delineates fat planes and soft tissue infiltration. Please explain why MRI was not done. 5. When was last time CT scan done for follow up? 6. Please provide histopathological image for confirmation of diagnosis alongwith immunohistopathological images. 7. Independent predictors of increased desmoid risk were: germline mutation distal to codon 1399- not distal codon 1399 8. Is it β-Catenin Gene (CTNNB1) or Beta-catenin d (CTNNB1) ? 9. Follow author guidelines for references 10. Please provide keywords.	Noted
Minor REVISION comments	Grammatical errors have to be corrected. Few sentences need English editing	
Optional/General comments	The case is good and interesting	

As per the guideline of editorial office we have followed VANCOUVER reference style for our paper.
