

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	Asian Journal of Medicine and Health
Manuscript Number:	Ms_AJMAH_37743
Title of the Manuscript:	Contraceptive Practices Among Married Women of Reproductive Age Group in Ogbomoso Metropolis, Nigeria
Type of Article:	Original Research Article

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
Author(s) have satisfactorily responded most of the concerns raised initially. However, author(s) appear not to have responded to some important comments that have implication for the integrity of the review process. The comments are highlighted in yellow in the feedback form submitted and revised manuscript (all documents attached). Lines 161-162: Author(s) wrote "In this study, there was a difference in the knowledge of contraceptives among the respondents as regards various religious bodies." The only test performed by author(s) was a chi-squared test and it only examined current contraceptive use. How did author(s) come about this conclusion? Lines 167-169: Author(s) wrote "If a reorientation of this particular religious caste is not done, contraceptives use by them will perpetually be null and this will undoubtedly lead to increase birth rate and mortality rates in the country." This statement is completely at variance with the results presented by author(s) in table 7.
