**PART 1: Review Comments**

	<b>Reviewer's comment</b>	<b>Author's comment</b> (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<b><u>Compulsory</u></b> REVISION comments	I am agree that the kits used are not very sensitive and this is shown in the low positivity in table 2 where for HIV only found one positive case within the risk factors and there were no statistically significant differences for HBV neither HCV.	<b>Though</b> rapid test kit was used for testing of the subjects. But we recommended more sensitive method like ELISA and PCR and enlarged sample size for further studies in the limitations of the study.
<b><u>Minor</u></b> REVISION comments		
<b><u>Optional/General</u></b> comments		Thanks
