

SDI Review Form 1.6

| | |
|--------------------------|---------------------------------------------------------------------------------------|
| Journal Name: | Asian Journal of Biology |
| Manuscript Number: | Ms_AJOB_36782 |
| Title of the Manuscript: | IMPACT OF HYBRIDIZATION ON OKRA (<i>Abelmoschus esculentus</i>) NUTRIENT ENRICHMENT |
| Type of the Article | Original Research Article |

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound.

SDI Review Form 1.6

PART 1: Review Comments

| | Reviewer's comment | Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here) |
|-------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Compulsory REVISION comments | Material and method section needs revision. Elaborate the methods of analysis of nutrients. Give the information about experimental layout. How many fruits (replications) were used to analyse the nutrients. | Thanks so much. The nutrient analysis was carried out according to the standard method described by AOAC 2005. Is of no need describing it as it is on line. We don't normally describe it again. You just mention the person whose method you used and that was what I did. The information about experimental layout is in the work. After hybridization followed the nutrient analysis. Have added the replication. |
| Minor REVISION comments | Meteorological information of the experimental site can be included in material and methods | Have added it. |
| Optional/General comments | Can be accepted after major corrections. | |
