PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	<ol style="list-style-type: none"> 1. In table 4, why was N 6 per group? You should show the results from N = 12/group. N of 6 is quite small. 2. As well, Figure 1 should be calculated from 12 rats. N= 6 is quite small. 3. You should show the results of 12 rats in Figure 2 and 3. If you worked on 12 rats of each group but showed the results of only 6 rats, how did you pick which ones to be presented? 	<p>Agreed with reviewer,corrected</p> <p>For figure 2 and 3,Rats that were suspected to be acyclic at some point of the experiment were not used to demonstrate the estrous cycle lengths,However,we presented the changes in the estrous cycle patterns and lengths in 19 days, these are about four to five cycles: good enough to show the changes.</p>
Minor REVISION comments		
Optional/General comments
