

### **Editor's Comment:**

Thank you for your email. I reviewed the comments and feedback of authors on article.

1- I think it is better to delete figure No. 7 in final text. because the information has been repeated in table. it was comment of one of the reviewer also but the author has not corrected.

2- one of the reviewer comment was "**It is mentioned in the conclusion that a positive correlation is found in Sarus crane number and agricultural fields and wetland but in the result section it is missing**".

**an other reviewer comment was "the authors** Can not say this, since the authors did not make statistical tests.

The authors did not answers to these 2 comments.

3-Another referee has pointed out that the article is a duplicate and lists two similar article

4- The authors answer is not compelling.

5-If the Figures are removed from the text of the article, the article's content is not enough for a scientific article

I think this article will be published as a **short communication**.
