

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	Asian Journal of Biology
Manuscript Number:	Ms_AJOB_38202
Title of the Manuscript:	Hepatoprotective effect of ginseng, green tea, cinnamon their combination against acetamiprid - induced oxidative stress in rats
Type of Article:	Original Research Article

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
<p>1) I think the author should write in methods: divide animals into 6 group: group Control; group Acetamiprid recover; group Acetamiprid + ginseng; group Acetamiprid + green tea; group Acetamiprid + cinnamon; group Acetamiprid + Mixture</p> <p>2) Some sentence the author should use name of author instead of [number reference] such as Also [28] reported...</p> <p>3) the symbol of statistic different are still not clear. Author should be symbol *,# for presents the significant differences. Author should compare other group with group Control and group Acetamiprid recover only. I don't understand about the: A, B, C, D, E Means with a common superscript within a row are significantly different at (P<0.05).; a, b Means with a common subscript within a column are significantly different at (P<0.05).</p> <p>4) The dose of extract for animals should be written.</p>	<p>Done it.</p> <p>Done it.</p> <p>A, B, C, D, E Means with a common superscript within a row are significantly different at (P<0.05), these for the treatments (six groups). Also, a, b Means with a common subscript within a column are significantly different at (P<0.05), these for the intervals (15 and 30 days) under liver function.</p> <p>The dose of extract for animals is 300 g, 30%, w/w.</p> <p>Thanks for your comments.</p>
