

Editorial Comments:

I reviewed the revised manuscript and reviewers' comments. One minor issue is in the Figure 1, the 3-D bar graph is not very clear. The author should change it to regular bar graph (3-D is not needed and does not add anything).

Author's Feedback:

I have changed the chart. This chart is added in the manuscript to indicate which carbon is utilized in common and which carbon is utilized by some.

I think I have changed in a way you have recommended too.
