

Reviewer's Comment:

Building a Visible Light Spectrophotometer From NaI Detector

The revised version of the above manuscript presents a great improvement compared to the firstly submitted.

However, there are still many language errors in various places in the text which Authors should be willing to correct (in their life they will read it more times than anybody else!).

I mention some examples below.

– In the 2nd and 4th and 5th paragraph of Sect. 2 (Instrumentation). Please, invert words "a building" in the headline of this Section.

-- In 5th paragraph of Sect. 3 (Flow ...)

--Last paragraph of Section 'Summary and Conclusions'

– Figure five is scientifically correct but the quality of the curve should be improved (even in the proofs stage). Also I would suggest the polynomial $A(C)$ and R^2 preferably to be inserted (parenthetically) in the figure caption.

--In the text I received, a large number of words are stuck together and I can't explain why. It gives the impression that Authors were in a hurry to submit their 2nd version, unless (most probable) the office applications version used is inconsistent with mine.
