

PART 1:

Journal Name:	Asian Journal of Chemical Sciences
Manuscript Number:	Ms_AJOCS_44725
Title of the Manuscript:	Isolation and Characterization of an isolated flavonoid from Averrhoa bilimbi
Type of Article:	Original Research Article

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
<p>Importance of analysing this particular plant is not mentioned in the introduction.</p> <p>Discussion part is not at all touched. Results also not extensive</p>	<ol style="list-style-type: none"> 1. Because of the diverse pharmacological activity of this the present work has been carried out in the view to isolate flavonoids from the methanolic extract of the fruits of Averrhoa bilimbi which will be helpful in assessing the mechanism behind its activity. 2. Discussion is mentioned along with the results at the bottom: <p>The structure of compound 1 was determined unambiguously as dihydromyricetin (5, 7, 3', 4', 5'-pentahydroxyl flavanonol) on the basis of 1D and 2D NMR spectroscopic data [10, 11].</p>
