

**Editor's Comment:**

I have read through the various versions of the manuscript and the comments by the reviewers, and I am recommending publication. I recognize the recommendation by Professor Stanislav Fisenko to reject the manuscript, but I feel that with its revisions, it is now marginally acceptable for publication in the *Asian Journal of Physical and Chemical Sciences*. I would prefer to see yet more discussion of physical applications of the theory presented, but it can be accepted in its present form.
