

SDI Review Form 1.6

Journal Name:	Asian Journal of Research and Reports in Neurology
Manuscript Number:	Ms_AJORRIN_43528
Title of the Manuscript:	Bobath versus Proprioceptive Neuromuscular Facilitation in retraining of balance and Functional Independence in Activities of Daily Living
Type of the Article	Original Research Paper

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

(<http://www.sciencedomain.org/page.php?id=sdi-general-editorial-policy#Peer-Review-Guideline>)

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	No major revision what is beneficence if the patient at group PNF How is the "Justice"	Regarding beneficence, PNF has been shown to be effective and widely used in treatment stroke patients (Guiu-Tula et al. 2017), especially in treatment of paresis which is the root cause of imbalance and functional dependence among stroke survivors. Since participants were assigned into treatment groups, following initial examination, based on their functional levels, it is just to conveniently allocate participants into group which they best fit into. Recall each of the approaches has specific functional requirements, and as such, participants were assigned into PNF with their next functional goal/task in view. However, since the PNF and Bobath groups, on average, are minimally dependent and partial dependents respectively, the two groups are comparable.
Minor REVISION comments	Manuscript does not tell about side effect or complication?? Is there any side effect about stroke for 3 months evaluation	In this study, no side effect or complication was reported with use of either Bobath or PNF.
Optional/General comments	Manuscript recommended to publish	

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	(If yes, Kindly please write down the ethical issues here in details)
