

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	Asian Journal of Probability and Statistics
Manuscript Number:	Ms_AJPAS_41002
Title of the Manuscript:	Spectrum of sex ratios in Denmark
Type of Article:	Original Research Article

PART 2:

FINAL EVALUATOR’S comments on revised paper (if any)	Authors’ response to final evaluator’s comments
Please find highlighted (in yellow), in the attached file some suggestions made by the reviewer concerning the format of some mathematical formulas. As I have already suggested the authors in my previous comments, try to avoid large mathematical expressions inside the text. If you want them to be in-lined with the text, please see the form that the authors should write them in those highlights. Also, variables t and T should be written in math mode (using MathType), i.e. in italics, and not in up-right form, i.e. t and T; see also the corresponding highlighted text. The only important comment for the authors is to check for correctness the formula $\overline{SR} = \sum_{t=1}^T (N_t SR_t) / N_t$ in line 91 of the attached file.	Line 91 One small misprint corrected. The formula is a (biased) weighted mean. This formula must be used if only the SR,s are known. The large mathematical expressions are checked. The t and T are checked.
