PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	The author must come up with some real life example or make a simulation study so as to justify the applicability of the obtained result. I found the application part and interpretation of results missing. The author should take into consideration research articles like Transmuted Burr Type III distribution (Ibrahim(2015)) general results for transmuted family of distributions (see Marcelo et al. 2016)	The contents of this article are totally theoretical results which may be employed by applied researchers in different fields.
<u>Minor</u> REVISION comments		
<u>Optional/General</u> comments	Generally the manuscript is very interesting to work on. I found the manuscript quite informative. I appreciate the author of such a good quality work. The paper should be accepted after the revision.	Revision is done.
