

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	Asian Journal of Probability and Statistics
Manuscript Number:	Ms_AJPAS_43141
Title of the Manuscript:	ANALYSIS OF RAINFALL PATTERN IN THE WESTERN REGION OF GHANA
Type of Article:	Original Research Article

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
From the author's response, the data used for the study is 11 years average monthly rainfall (2006 – 2016). I'm still of the opinion that an appropriate model which fits the rainfall pattern over Western Region of Ghana and could be used to estimate future rainfall amounts (which is one of the objectives of the study) cannot be derived from 11 years monthly average rainfall data. Line 76 The title of the section is Methods and data and the section dwelt only on the methods without a mention of the source and duration of the data used in the study. In stating the major purpose of the study in Lines 69 - 71, include the complete name of the study area. Any reader can assume it's the Western Region of any other country.	We the authors believes that the 11 years monthly data (That is nominal daily rainfall recorded (1485) aggregated into monthly rainfall value (99 data point)) is appropriate for predicting future rainfall value. However, that is the only available data we could lay our hands on. Issue addressed Issue addressed
