

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	Asian Journal of Probability and Statistics
Manuscript Number:	Ms_AJPAS_43247
Title of the Manuscript:	The Transmuted Odd Lindley-G Family of Distributions: Theory and Applications
Type of Article:	Original Research Article

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
<p>All is okay but please reply about the following points</p> <ol style="list-style-type: none"> 1. Include few lines about motivation of TOL-G family of distributions. 2. In Table 4 and 10, you have negative values of L but in other table you have positive values of L, you have not described the role of estimated log likelihood in application section. It needs to be corrected. 3. Describe the reason of studying Censored data. 	<ol style="list-style-type: none"> 1) We added a motivation part. 2) The positive or negative signs in the Log Likelihood in tables (4,6,8,10) depend on for the nature of the data set. The proof of that is Tables (4) and (10), not only our model has a negative L but all the competitive models have also the same which demonstrate that the kind of data affect on the sign of L. 3) The reason to study censored data is to make our proposed family more valuable in practical applications.
