PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	Nothing	
Minor REVISION comments	(1) "et al" should be replaced with "et al." (2) "the presence of Multicolliniarity" should be replaced with "the presence of multicolliniarity". (3) "The study therefore, determines efficient estimators among Least Absolute Deviation (LAD)" should be replaced with "The study, therefore, determines efficient estimators among Least Absolute Deviation (LAD)"(a comma should be added). I would like to suggest that this manuscript should be edited by an expert of English.	Accept with minor correction
Optional/General comments	(1) The numerical simulation should contain simulations using OLS (Ordinary least squares) because most readers are interested in comparison of the performance of OLS and other methods such as LAD. (2) If possible, you should add the interpretation of the results of the numerical simulations. It will make the "CONCLUSION" more fulfilling.	Accept with minor correction
