

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	Asian Journal of Pregnancy and Childbirth
Manuscript Number:	Ms_AJPCB_44542
Title of the Manuscript:	A Cross-Sectional Study on the Factors Leading to Unintended Pregnancy in Women Attending Selected Health Facilities in Kumasi, Ghana
New Title of the Manuscript:	Study of the Factors Leading to Unintended Pregnancy in Women in Kumasi, Ghana
Type of Article:	Original Research Article

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
I STILL have questions. Namely, all of the participants are reported to have either a mistimed or unwanted pregnancy, which I find surprising given that the authors state that all women accessing care for ANC were invited to participate. I cannot believe that none of the women planned their pregnancies. Further, I am not clear in the discussion what is meant when the authors talk about some women being more likely to report an unintended pregnancy; both mistimed and unwanted pregnancies are considered unintended in the literature. These issues should be clearer.	It is not entirely correct that all the participants reported either mistimed or unwanted pregnancy. From the analysis, 3.5% of the unmarried indicated that they planned their pregnancy as well as 5.8% of the never married group saying they planned their pregnancy. With respect to some women being more likely to report an unintended pregnancy, our study found out that both the married and unmarried were all likely to have unintended pregnancy. This has been corrected in the discussion section.
