

Editor's comments:

The manuscript entitled "Population structure of *Prunus africana* (Hook.f.) Kalkm. and *Olea europaea*.L in South Nandi Afromontane Forest, Kenya" has successfully demonstrated existence of the two tree species of importance to the Kenyan peoples is threatened.

Despite their efforts of survival through self-regeneration, harvesting by local communities seems to be performed at a greater pace. Hence, the need for a human-aided regeneration and actions towards a sustainable use of the species.

Minor but meaningful corrections are made based on the comments contained in the revised (and figure-free) manuscript attached herewith this e-mail.

Author's feedback:

Thank you for the quick response in reviewing the manuscript.

I have gone through and accepted corrections as per the editors comments_on the revised manuscript (with figures) .
