PART 1: Review Comments

| | Reviewer's comment | Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here) |
|-------------------------------------|--|---|
| Compulsory REVISION comments | <p>The results of the paper could be used to inform policy makers on the issue of provision of energy. The paper therefore lacks some vital information. For example, the author (s) made reference to many policies being implemented to decrease household wood-energy consumption to substitute it by alternative conversional fuels. However, the author (s) could not make reference to a specific policy or section of that policy document (s). On the other hand the author (s) made recommendation that the government should come-up with strategies to reduce overreliance of households on the use of hard fuel. I found these to be contradictory statements because government policies will have strategies to be put in place.</p> <p>Clearly more information/clarity is needed in this paper. For example, the author (s) made statement about the socio-economic status threshold of households, which was not mentioned or explained.</p> <p>Source (s) of energy prices not provided</p> <p>In 2006 the population of the study area was 850 000, and in 2017 it is estimated to be 472,086. These figure are conflicting. Why should there be huge drop?</p> | |
| Minor REVISION comments | | |
| Optional/General comments | | |
