

Editor's Comment:

The manuscript entitled "SWOT Analysis of Large Cardamom in Ilam District, Nepal" has revealed factors that contribute to strengthening Large Cardamom development in Ilam district of Nepal including, in the decreasing order of importance, the relatively high profit, and high demand in international market, to name a few. The opportunities have also been identified notably the establishment of an essential oil extraction industry and the development of varieties according to the altitudes. The two most important weakness factors were the high price fluctuation and the lack of farmers' knowledge on orchard management. Declining productivity due to diseases and high fluctuation in selling price constituted the All the reviewers and editor's comments were considered by the author (s) that contributed to having an informative, and useful paper for the large Cardamom-growing community and a comprehensive document for scientists as well.

Therefore, the latest version of the manuscript attached herewith this e-mail is recommended to The Asian Journal of Research in Agriculture and Forestry (AJRAF) for publication.

The manuscript is recommended for publication by AJRAF.
