PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	In this manuscript, the authors conduct a field experiment on the runoff and soil loss of four different types of land use. In general, the topic is relevant for the journal. However, the study was not well described at all. Moreover, it is not clear what is the objective, how the land use type was implemented. There was no further discussion about tree plantation, linear correlation method related to soil and water conservation, which is described in the "CONCLUSIONS". The text is poorly edited and there are severe scientific writing problems. There are two "Table 1". Only "3.1" section was showed in the "RESULTS AND DISCUSSION". The authors have not seemed to care a lot about editing.	Of course as first version it lacks some clarity and editorial. But we modified it as much as possible by including the main objectives
Minor REVISION comments		
Optional/General comments	The manuscript should be released.
