PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	This paper aims to analyse a tell friend exploit and proposes a solution to stop this exploit. The abstract of this paper should consists of summarization of problem statement, objective to achieve, method used, contribution and future work. The major problem of this paper is that it does not look like article to be publish in journal. It's more like technical report. It is advisable if the author can re-structure the writing so that it will look like journal writing. If possible the section can be like Introduction, Related Work, Finding and Analysis, Proposed Method to overcome the exploit and Conclusion. Both figures given in the paper are not sharp hence the information are not clear. Overall, this paper is based on some good ideas and certain information are very useful. However some of the information should be rearranged and organize so that the useful finding can be conveyed easily to others researcher.	Thanks so much Please see if any attacker build web site page using the tell friend script Like in this http://abozainebofflinewebshop.net/tell.php The previuos link is for test. Now it does not work because author use free web host that does not support all features of hosting.
Minor REVISION comments		
Optional/General comments
