

SDI FINAL EVALUATION FORM 1.1

yesPART 1:

Journal Name:	Asian Journal of Research in Computer Science
Manuscript Number:	Ms_AJRCOS_43443
Title of the Manuscript:	Implementation of Stable Marriage Algorithm in Student Project Allocation
Type of Article:	Short Research Article

PART 2:

FINAL EVALUATOR S comments on revised paper (if any)	Authors response to final evaluator s comments
Yes paper has been revised. Grammar has been improves a bit. still so many grammatical mistakes are found. This is no way a research article. It is just an application of orginal paper (Gale).Original work has been implemented. Only one example has been shown. Original algorithm has been implemented as it is.	More of grammatical mistakes as stated by the reviewer have been checked and further corrected as much as possible. The research work is targeted to demonstrate how basic Gale sharply algorithm can be applied in different context (Here in students project allocation) as opposed to marriage problem. The algorithm is implemented in different areas by many researchers (example Doctor allocations to hospital), so the work aim to implement the main algorithm in project allocation, which the reviewer has testify that it is implemented. Furthermore, the system is developed in such away that, when number grew larger (both student and project) the two parties need not to rank each other entirely, but rank only few and the system automatically rank the remaining and add to the end of their preferences. By this, there is a little extension from basic Gale sharply (where both parties in matching most rank each other).
