

Editor's Comment:

I declare that the paper entitled "**Clinical efficacy of oral terbinafine, fluconazole and itraconazole in the treatment of tinea corporis**" is accepted. However, I have eight comments on that paper, some of them are vital. I wrote the comments at the end of the manuscript, please check. I hope in more future cooperation.

Comments

- 1- The authors didn't use paired t-test **[vital]**.
- 2- The 2nd sentence in 1st paragraph in the introduction section is really rationale of the study, so it is better to put before the aim of the study.
- 3- When use an abbreviation you should mention the full term at the first time, KOH.
- 4- The middle sentence in 1st paragraph in the results section is really statistical analysis, so it is better to be put there.
- 5- Titles of the figures are classically put beneath them.
- 6- When use author's name of a reference in the text, you should use the author's family name only and put reference number after it e.g. Kumar et al **[vital]**.
- 7- There are two references (Surendran **KAK** et al and Neetu **J** et al) in the text not present in the list of references, please check all references **[vital]**.
- 8- In references number 4, you used the author's name and not the family name (check the original paper), please check all references **[vital]**.
- 9- **Green** color → Added or corrected.
- Red** color → Delete.
- Pink** color → Not present.
