SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<b>Compulsory</b> REVISION comments	<p>Since this is a report, the tenses should be in the PAST. The authors should please read through and convert the present tenses to the past as there are a lot of such errors spanning through almost all the sections of this manuscript.</p> <p>For example, line 34..... "is should be " was" Line 34 ....has Line 35.....is Lines 37, 38, 39, and 40.. "is" should be changed to " was" e.t.c</p> <p>The section of the "Final diagnosis" and "Treatment" should be incorporated under the section of "Case report"</p> <p>The manuscript lacks a "conclusion". The author should provide a justified conclusion, and possibly an evidence-based recommendation, lessons learnt, and how the information provide could be applied to practice.</p>	
<b>Minor</b> REVISION comments	<p>Several of the statements of fact between lines 210 and 220 will require citations. I will recommend that every statement between the mentioned lines should ascribed at least one citation.</p>	
<b>Optional/General</b> comments	<p>This is an interesting report. However, I will suggest that it should be reviewed by a native English speaker for tenses, grammar, punctuations, syntax etc.</p> <p>For instance, lines 209-212 may be rephrased to read thus:</p> <p>Also implicated in the etiology of cutaneous vasculitis are viruses such as Hepatitis B [ref], HIV [ref], as well as food and food additives [ref].</p>
