

SDI Review Form 1.6

Journal Name:	Asian Journal of Research in Infectious Diseases
Manuscript Number:	Ms_AJRID_41755
Title of the Manuscript:	An Interesting Case of Sphingobacterium multivorum Neck Abscess
Type of the Article	Case Study

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	Microbiological data are not well exposed, and microbiological assessment is lacking. I think that a better description of methods used for microbiological diagnosis in laboratory is necessary (isolation, identification, exact determination of species). Similarly, a better description of antibiogram, (methods used by Author, and type of results (international scores for sensitivity, or resistance)) would be useful.	
Minor REVISION comments	The modalities of writing genus and species are not totally exact. Better <i>Sphingobacterium multivorum</i> (or Sphingobacterim multivorum) and so on for other bacteria too.	
Optional/General comments	This paper is interesting for conclusion and for relative infrequent isolation of this microorganism, particularly in normal patients. I think would useful a review of medical terms and of language.
