SDI Review Form 1.6

PART 1: Review Comments

| | Reviewer's comment | Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here) |
|--|---|--|
| <u>Compulsory</u> REVISION comments | | |
| <u>Minor</u> REVISION comments | Both Table 1 and Table 4 are similar. Both show age at onset/ occurrence of VVF. Please explain why these tables have been separated, how these two age groups are different with respect to each other. | |
| <u>Optional/General</u> comments | <ol style="list-style-type: none"> 1. Discussion is well written. 2. Sample size of the study is very small. In an epidemiological study, sample size should be large enough to detect statistically significant differences. 3. Psychological aspects could have been discussed in much more detail in the discussion section. For ex. a table showing number of divorces/ how life changed after repair would have given more insight. | |
