

Editor's Comment:

I have gone through this paper and some observations are made and recorded in reviewer form.
There are few flaws in the study, which must be corrected before accepting the paper.

Reviewer form with observations is hereby attached.

1. **Specify criteria of hypoglycaemia in abstract i.e, <40 without symptoms and <50 with symptoms should be defined.**
 2. **Classes of medications have to be mentioned (oral antidiabetics / Insulin) as different insulins have different time and mode of action.**
 3. **Nowhere is defined Exclusion Criteria (like patient with fever or other systemic illness excluded, etc.)**
 4. **No where mention of statistical analysis except software name: How was analysis conducted? Which type of tests was performed to determine significance?**
- All measures taken after Hypoglycaemia detection should also be mentioned on ethical ground.**

1. **Grammatical errors in Discussion**

Paper has to be modified with information regarding years in diabetes and type of insulin treatment (short/long acting/ any specific type and/or on adjuvant OHAs)
