

## **Response to comments**

- 1. Specify criteria of hypoglycaemia in abstract i.e, <40 without symptoms and <50 with symptoms should be defined.**

Done.

- 2. Classes of medications have to be mentioned (oral anti-diabetics/insulin)as different insulins have different time and mode of action.**

Done.

- 3. Nowhere is defined exclusion criteria (like patient with fever or other systemic illness excluded, etc).**

Done.

- 4. No where mention of statistical analysis except software name: How was analysis conducted? Which type of test was performed to determine significance?**

In our study, "t" test is not applicable as our study did not compare two populations of patients.

- 5. All measures taken after hypoglycaemia detection should also be mentioned on ethical background.**

Done.

- 6. Plagiarism issues: its 30% (borderline).**

Sorted.
