PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	<p>I have critically read this manuscript over and over again. While the author understandably stated that studies may subject children to some risks and deny them the benefits of some drugs, the overall conclusion of the study is not scientifically factual.</p> <p>Children are not small adults. Their body structures and functions are different.</p> <p>Author should rather advocate that where appropriate, children of all ages should be included in phases 1-3 clinical trials instead of having separate clinical trials. Clinical trials that include people of all ages are necessary to establish the pharmacodynamic and pharmacokinetic properties of new drugs.</p>	
<u>Minor</u> REVISION comments		
<u>Optional/General</u> comments
