

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	Asian Journal of Research in Nursing and Health
Manuscript Number:	Ms_AJRNH_43644
Title of the Manuscript:	Prevalence and Risk Factors of Low Back Pain among Healthcare Staff in Operating Rooms at Al-Fateh Children Hospital
Type of Article:	Short Research Article

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
<p>There are a lot of things to comment on this revised version. Although the author/s had put in their best to revise the manuscript, I still maintain that the use of English Language is defective. Technically, the author/s should improve on scientific writing. A citation/reference of 2011 is not recent in 2018 (see reference 3 and many others). Copies of questionnaire are designed or structured NOT "performed" and administered NOT "distributed". The results in tables should not be repeated in text, even the figures in the text are conflicting with those in the tables, e.g. the author/s stated in Table 1 that "the majority of the study subjects were nurses by 69.6% while the rest of them were physicians by 26.1%", in that table, the percentage of the nurses and the physicians were designated as 58.5% and 15.2% respectively. The author/s stated that 23 health care workers (HCWs) participated in the study, but the figures in most, if not all the tables show diverse numbers of HCWs. For instance, in Table 1, under the occupational characteristics; physicians were 5, nurses 25 and technicians 2; this totals 32 instead of 23. Under the gender of the HCWs, males were 6 and females 25, totalling 31. By age group, the total is 28 in the same table. To me, as a reviewer, too many things from the title to the references are not so right in this study.</p>
