

Editor's Comment:

I have few observation in RESULTS section that need to be rectified:

1. Overall seroprevalence

No. Of males: 324

No. Of females: 123

How could M:F ratio be 1:1.3?

2. HBsAg positivity

a) No. Of males: 354

No. Of females: 99

How could M:F ratio be 1:1.3?

b) Moreover 72% should be (n=255) and not n=2550

3. HCV detection

No. Of males: 69

No. Of females: 24

How could M:F ratio be 1.1.3.2 ??? Very confusing.

After correction, the manuscript can be accepted.
