

Editor's Comment:

I have gone through the revised V2 version of the manuscript titled '**MASSIVE HEMATEMESIS FROM GASTRIC DIEULAFOY'S LESION, surgery as a curative option when there is lack of access to expertise**'.

I would like to mention the following points:

1. Some grammatical mistakes such as capital letters, incorrect grammar in the sentences, incorrect punctuations and missing words have been **CORRECTED IN BOLD, RED UNDERLINED FONTS** throughout the V2 revised manuscript.
2. Under the **ABSTRACT** heading, in the second paragraph, third line, the authors have mentioned 'Two trails of local epinephrine referred'. I do not understand the meaning of the word 'trails'. Kindly replace the word 'trails' as it does not fit in the sentence.
3. Kindly add 'Surgical intervention' as a **KEYWORD** under **ABSTRACT HEADING**
4. The title of the manuscript case study should be in small letters.

The case study is written very well following the reviewers feedbacks and comments and should be taken up for publication once the minor revision has been corrected.

The CORRECTED MANUSCRIPT file is attached herewith.
