

SDI Review Form 1.6

Journal Name:	Asian Journal of Research and Reports in Urology
Manuscript Number:	Ms_AJRRU_42522
Title of the Manuscript:	Abdominal Compartment Syndrome: A rare but fatal complication of Percutaneous Nephrolithotomy
Type of the Article	Case Report

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

(<http://www.sciencedomain.org/page.php?id=sdi-general-editorial-policy#Peer-Review-Guideline>)

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments		
Minor REVISION comments	Authors describe a rare but dangerous complication of PCNL. The abdominal compartment syndrome is characterized by an abdominal pressure > 20 mmHg that leads, among other things, to decreased venous return and ventilatory problems. It is very important to recognize this life-threatening complication in order to limit his negative effects. This is not the first report of such a complication but literature on this topic is very scant and new reports on this topics could be of interest to the urological community. The case presentation is well done and also the discussion and conclusions section is complete. In the references section the most important works on this topic are reported. Considering that the lack of novelty is not an issue for the Asian Journal of Research and Reports in Urology, I think that it could be published with the only suggestion to add the dimensions of the stone at the end of the line 31.	I am grateful for the suggestions. The stone dimension has been added in line 33.
Optional/General comments
