

**SDI FINAL EVALUATION FORM 1.1****PART 1:**

Journal Name:	Asian Journal of Research in Surgery
Manuscript Number:	Ms AJRS 40797
Title of the Manuscript:	Posterior inguinal wall reinforcement after mesh removal for infected mesh
Type of Article:	Original Research Article

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
<p>When I asked the question "What characteristics of the cremasteric apparatus provide a good support to the inguinal floor. What is the biological and biomechanical explanations?" I did not mean the usual duty of cremasteric apparatus in a healthy subject. I just meant that what mechanism CA prevent the recurrence. What is the biological biomechanical benefit from CA?</p> <p>In my opinion the table is not necessary. This kind of statistical analysis does not support the paper.</p> <p>This is a technique of the authors. The editor will make the decision for publishing.</p>
