

Editor's Comment:

We have carefully analyzed the evaluation process, the reviewers' recommendations and the authors' response.

I think the author has made important changes and at this stage the paper can be well understood and contributes to the development of knowledge about the seedlings development of Jaboticaba when submitted to different nitrogen fertilization in two periods of development at the greenhouse.

As a result, from my point of view the paper can be accepted for publication after making the following corrections:

1. Use the point (.) In separating decimals throughout the paper and not the commas (,).
2. Use the Italic style for all Latin names of species.
3. Develop Conclusions with 2-3 extra phrases that include table values to support them.
