The study allows to know the morphology and physico-chemical characteristics of those soils and to assess their vulnerability to erosion. It is a real contribution for the soil management in the area for agriculture practices.	
Minor REVISION comments	<p>Introduction:</p> <ul style="list-style-type: none"> - Remove the section "Location of the study area" from the introduction and put it as first section of MATERIAL AND METHODS. <p>Materials and Methods:</p> <ul style="list-style-type: none"> - Avoid the use of "we", make the text impersonal; - Correct "érodibilité" in the text 'page 3 <p>Results:</p> <ul style="list-style-type: none"> - You don't give the least value at which the erodibility of the soil is noticed for any parameter (CDR, CA, DR, ESP and ESR)!!! - The "erodibility index" is not calculated anywhere. You just talk about erodibility indices in the methodology; - The map of figure 3 is done with which data?
