

SDI Review Form 1.6

Journal Name:	Asian Oncology Research Journal
Manuscript Number:	Ms_AORJ_39480
Title of the Manuscript:	INFANTILE HAEMANGIOMA IN A 'BEARD' DISTRIBUTION: A CASE REPORT
Type of the Article	Case Study

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

(<http://www.sciencedomain.org/page.php?id=sdi-general-editorial-policy#Peer-Review-Guideline>)

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	1) The authors state that the diagnosis of haemangioma is made by the clinical situation. However, haemangiomas do not grow or spread rapidly. In this unusual case, with a potential life-threatening complication due to airway compromise a further work-up and evaluation should have been undertaken. Was this a true haemangioma or another more aggressive vascular neoplasm tumor? Such as angiosarcoma? Without a pathologic diagnosis this is uncertain. Based on a lack of information the diagnosis of haemangioma cannot be certain, and I cannot recommend publication of this article at this stage. 2) The image provided is of poor quality, and is not useful for evaluation. Ethical Issue - A picture of the patient is shown, no documentation of permission for displaying this picture	The unavailability of certain facilities in our centre negatively impacted our ability to investigate this patient. Most infantile haemangiomas undergo a phase of rapid expansion, followed by a stationary period and finally spontaneous involution. However, the patient's rapid response to propranolol may be an indication that we were dealing with an infantile haemangioma and not an 'aggressive vascular neoplasm'. Express permission was obtained! Moreover the patient's face was not displayed.
<u>Minor</u> REVISION comments	Please correct spelling and grammar	Noted and effected
<u>Optional/General</u> comments
