

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	Asian Oncology Research Journal
Manuscript Number:	Ms_AORJ_39480
Title of the Manuscript:	INFANTILE HAEMANGIOMA IN A 'BEARD' DISTRIBUTION: A CASE REPORT
Type of Article:	Case Study

PART 2:

Editorial comments on revised paper (if any)	Authors' response to final evaluator's comments
The authors have corrected minor problems such as grammar and spelling, and stated that permission was obtained to report this case, though should be more specifically stated regarding who gave permission. However, the authors have not fixed the major deficiencies in this report, specifically no pathologic diagnosis, and poor quality imaging. Basically case study fulfilling major health concerns and related clinical findings should be accurate Authors presented the case study Airway obstruction as major findings and so many clinical findings remains unclear (Eg: Hemangioma confirmatory test using IMMUNOHISTOCHEMISTRY). Most of the statement not briefly explained about the patient. Reputed data and basic introduction filled in the manuscript. Authors should represent the case study in detailed form (noted missing in manuscript), Coherency is missing. Discussion part, the author mentioned more of basic introduction. Author should rewrite the manuscript and give the clear clinical findings	Noted and complied with. There are no facilities for pathological diagnosis in our facility hence diagnosis was mainly clinical in this case. We have made attempts to improve on the quality of imaging. Noted and effected. The case has been rewritten to address the editor's concerns.
