SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments Written language is poor.	The manuscript has to be written in good English before it can be reviewed. I have made some comments on the abstract. I have gone through the main text and find many areas needing proper English construction. The review has to be more robust with current references related to the topic for it to be considered for publication.	Acknowledge for the valuable comments. Corrections were made.
Minor REVISION comments	The title is grammatically wrong.	Correction was made.
Optional/General comments	The manuscript must in clear language highlight the importance of the 3 families reviewed. How their properties are useful in traditional medicine and its relevance to snakebite treatment. In other words, the review must be systematic. The flow of thoughts must be consistent and build up to support the use of herbs in treating snakebites. In what ways are they better than antivenoms. Highlight case reports where herbs have been successfully used in treating snakebites. References List can be improved. Some not accessible online. Some are homepage for Ayurveda Treatment Centres only. Some literature for reference 1.
