Manuscript title: ARE NEW GENERATION OF STUDENTS OF HEALTHCARE MANAGEMENT
FOCUSED ON SOCIAL ENTREPRENEURSHIP? A FIELD STUDY

Introduction	It is good if the authors can provide a brief explanation about background of the study
Literature review	The authors should provide some critical review related to social entrepreneurship and the chosen variable in the paper.
Methodology	The method of analysis is sufficient. I am curious about the lines 159 – 162. I think it is not appropriate to use independent and dependent variable since there is no specific econometric model was used in the analysis to analyze the relationship between both variables. I think Table 1 is not needed since it contains only one line. It is enough to write in paragraph as mentioned in line 168.
Findings	• Change the word 'wee' to 'were' in line 180. • Letter 'X' and 'SD' should be defined to allow reader understand what are they. The authors can put 'note' under the table. • I do not really agree with the word 'correlation' for Table 4 – Table 9. Do those tables describe correlation? Those tables actually describe descriptive analysis of each variable according to dimension(s). • The letter of 'F' and 'p' should be written as '<i>F</i>-value' and '<i>p</i>-value'. • 'T-test' should be replaced by 't-test' • All <i>F</i>-values are very low. Can the authors give comments on this? • On what basis the words 'significantly' are used in lines 244, line 253, line 268, line 283 and line 296. All <i>p</i>-values are greater than $p=0.005$. • The authors reported the result only. They should critically evaluate the result and compare those results with the previous findings/study. This should be done to justify the authors' findings.

Author's Feedback:**Introduction**

Background of the study is briefly explained in Line24-Line32.

Literatur review

Some critical review related to social entrepreneurship are added, Line57-62 and-Line 124-129.

Methodology

Table 1 and Table 2 was deleted as suggested.

Findings

Added notes about x and sd.(line 196)

Wee is corrected as were.(Line 179)

Table 4-Table 9 their names have been corrected.

The letter of 'F' and 'p' are written as '*F*-value' and '*p*-value'.

T-test' is replaced by 't-test'.

The words 'significantly' are used in lines 244, line 253, line 268, line 283 and line 296 -----have been corrected.

More publications have been searched on your recommendation. The results were added to the discussion part. The results have been compared with the previous findings/study at the 'Discussion' part. Over and above Line 335-339 and line346-347 are added.
