

**Editor's Comment:**

In **general the manuscript** cited 20 basic references, being 95 % before to the year of 2012. In the **Results and Discussion** topic, the authors did not present bibliographic references. The discussion topic needs to be more thorough and based on the recent international literature. Considering other works, the discussion and conclusions of the manuscript should be further explored.

**Author's feedback:**

Thanks for the comments once again. However, all issues pertaining to the bibliographic references were all provided as such I don't see where you still want me to add again.
